EXECUTIVE SUMMARY

GP L90D is £8.3M with growth masking structural pressure. Eight interventions capture £1.5M–£2.9M toward the £4M target.

Of 17 recent initiatives, 11 show measurable P&L impact: **net positive on portfolio**, with card production vendor (#9) as the clearest drag. Lifestyle, Card Payments, Subscriptions and Savings drive ~£740K/month of run-rate growth; FX, Interest Income and Bank Payments drive ~£290K/month of decline. Net of all categories: **+ £390K/month**.

+48% L90D over 6–12 months

THREE MOVES THAT DRIVE ~75% OF SIZED RECOVERY

1. **Restructure the vending machine campaign.** Largest controllable cost at £2.8M across 91 days; 76% goes to users who never activate. Qualification gate + spend cap recovers **£800K–£1.3M**.
2. **Launch eSIM travel campaign** targeting business-traveller corridors. Daily revenue grew 11.5x from May to July on 9 users. Worth **£190K–£500K** at scale.
3. **Reprice FX spread** by currency pair and plan tier, starting with Romania. Daily run rate fell 41% from May to July; recovering 25–50% adds **£170K–£340K**.

Source: 196,187 user-level P&L records, Apr 24–Jul 23 2024 (L90D window provided in the dataset; 91 days inclusive). Amounts in £1,000s per documentation. Month comparisons use daily run rates (May 31 days, Jun 30, Jul 23).

ROOT CAUSE ANALYSIS

Daily run rate grew +£13K/day (+15%) from May to July, driven by four growth categories offsetting three structural declines.

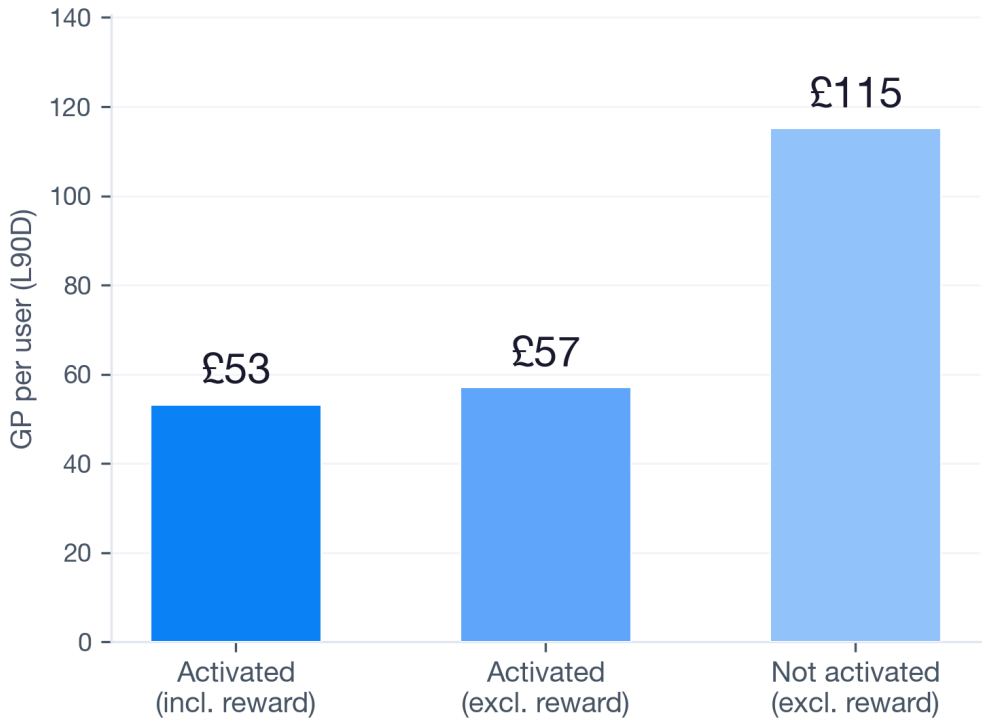
Growth: Lifestyle (+£9.1K/day), Card Payments (+£9.1K/day), Subscriptions (+£4.1K/day), Savings (+£2.3K/day). Decline: FX (−£5.2K/day), Interest Income (−£2.6K/day), Bank Payments (−£1.8K/day). Net impact at 30-day run rate: +£390K/month.

Daily run rate bridge: May GP÷31 days vs Jul GP÷23 days. Day-normalised to correct for July's 23-day window (data extracted Jul 23). Categories with change below £100/day excluded.

DEEP DIVE: LARGEST COST LEVER

The vending machine campaign cost £2.8M across the L90D window. 76% went to users who never activated.

Stripping the reward, each non-activated user generates £115 in GP vs £57 for activated ones. The reward structure, not the user base, drives the cost.



£115 GP/user without the reward vs £57 with it

Without the reward, non-activated users generate 2x the GP of activated ones. The cost sits in the reward structure and card dispatch process, not in user quality.

Qualification gate + spend cap

1. Require digital activation before dispatching physical cards.
2. Cap daily spend at £16K (May and July run rate: £32K and £31K/day).
3. Track activation rate by channel to optimise allocation.

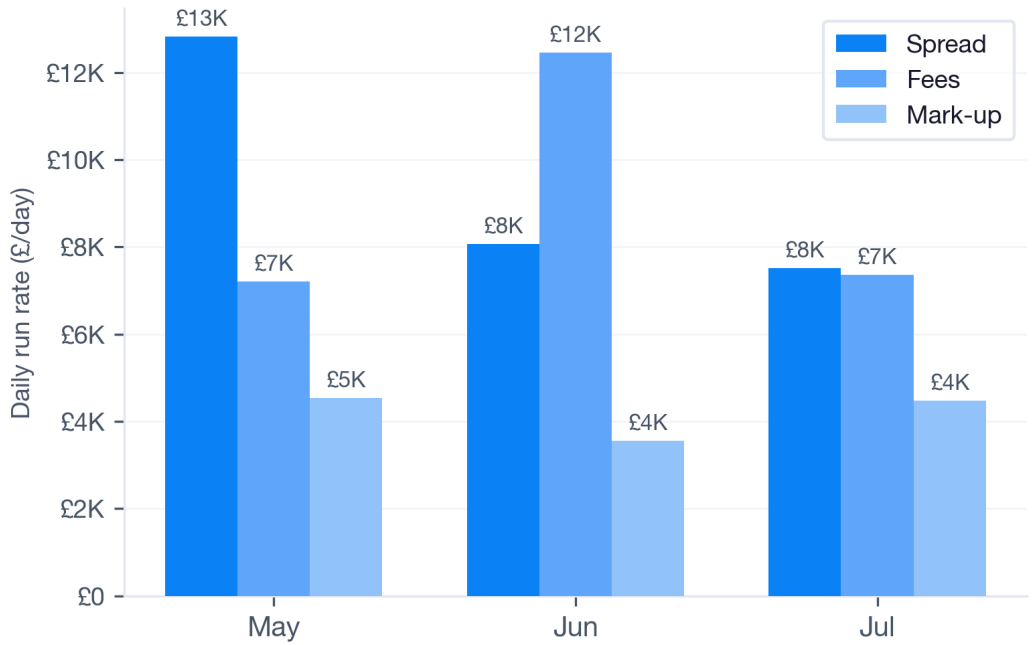
Recovery: £800K to £1.3M per L90D | Largest single intervention

GP/user = total GP / unique users per NAP segment across all 91 days. Vending Machine Rewards isolated via account_level_4. Colour coding: • Actionable Dashed border = recommendation.

DEEP DIVE: STRUCTURAL REVENUE PRESSURE

Three revenue lines are losing ~£290K/month of run rate. FX spread and bank payments are the most actionable.

Ordered by controllability. All figures are daily run rates (May÷31, Jul÷23). FX and bank payments respond to pricing review. Interest income is a mix story. Subscriptions are actually recovering.



↘ FX spread: £12.8K→£7.5K/day (−41%)

Steepest structural decline; FX overall is −£5.2K/day. Romania FX Spread fell 66% daily. Review by currency pair and plan tier. **Recoverable: £170K to £340K**

↘ Bank payments: £7.2K→£5.4K/day (−25%)

UK (−£918/day) and Romania (−£466/day) led the decline. Init. 5 explains Romania (HUF/RON free for Premium); UK warrants separate investigation. **Recoverable: £90K to £180K**

↘ Interest income: −7% daily (asset mix)

Cash at banks is actually **+3% daily**; the decline sits in Other Financial Assets (−34% daily). Balance optimisation may offset **£50K to £100K**.

↗ Subscriptions: £28.0K→£32.1K/day (+15%)

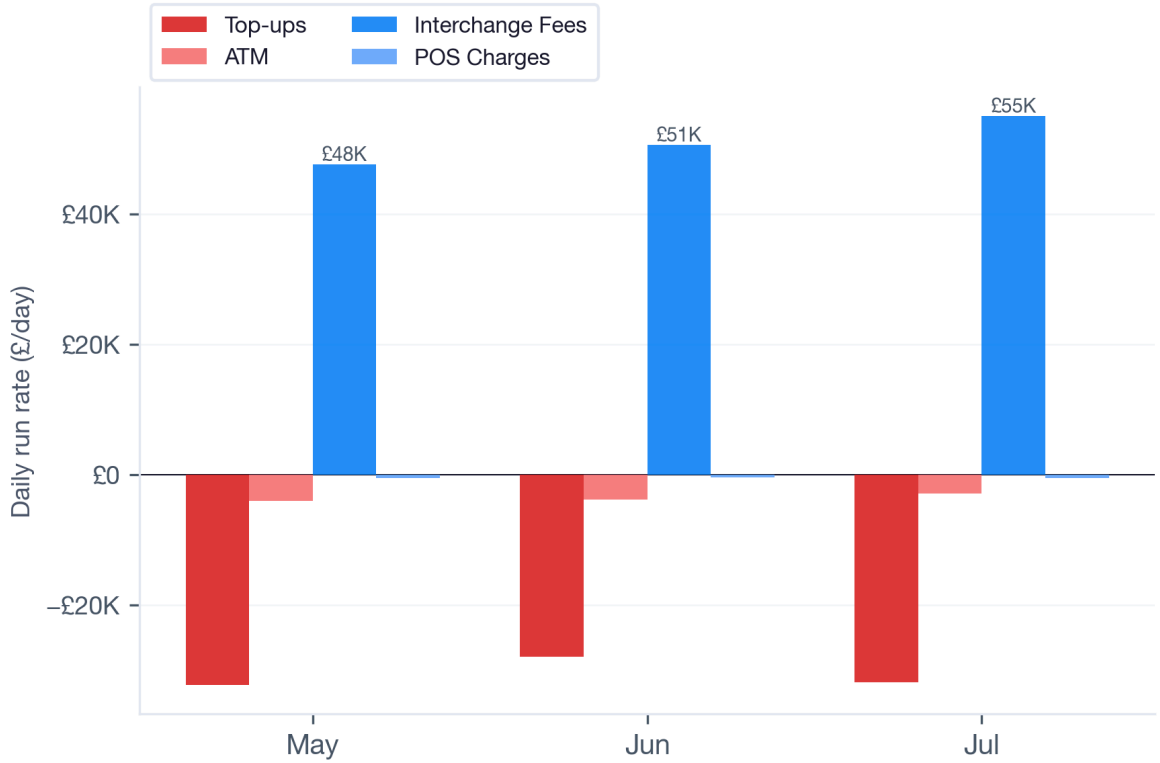
Plan Fees recovered to £29.2K/day in Jul after a £20.2K/day June trough. Initiative 7 benefits appear to be driving re-engagement.

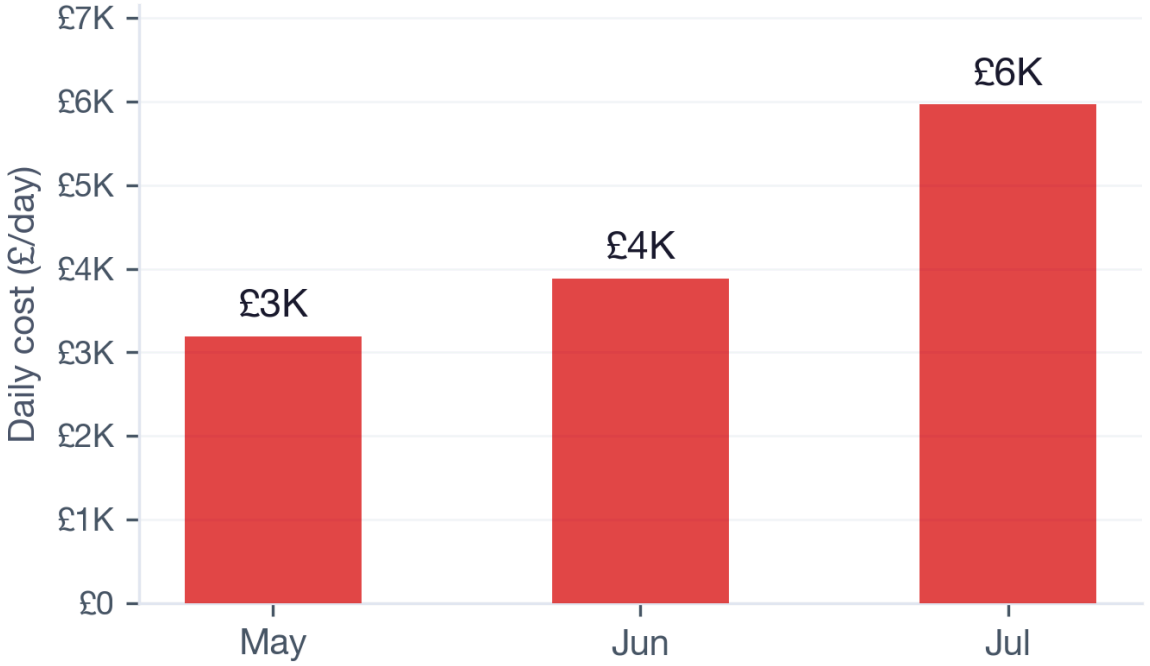
Daily run rates by account_level_3 (May÷31 days, Jun÷30, Jul÷23). Ordered by controllability. Colour coding: ● Risk / decline ● Monitor ● Growth opportunity.

DEEP DIVE: CARD PAYMENTS

Card payments is a +£273K/month run-rate growth engine, but card production costs are rising 87% daily.

Two card initiatives with opposite outcomes. Card payments revenue is accelerating (Initiative 8 + volume growth). Card production cost is the clearest hurting initiative in the portfolio.





Interchange fees up +£7.5K/day (+16%)

Net card payments GP: £11K→£20K/day. ATM costs improved **+29%** daily (Init. 8 vendor change). Completing the migration recovers **£100K–£200K**.

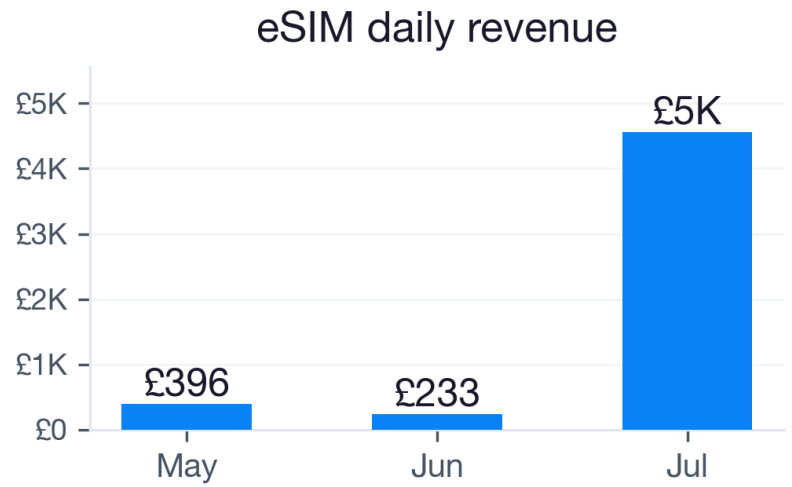
Card production: +87% daily (£3.2K→£6.0K/day)

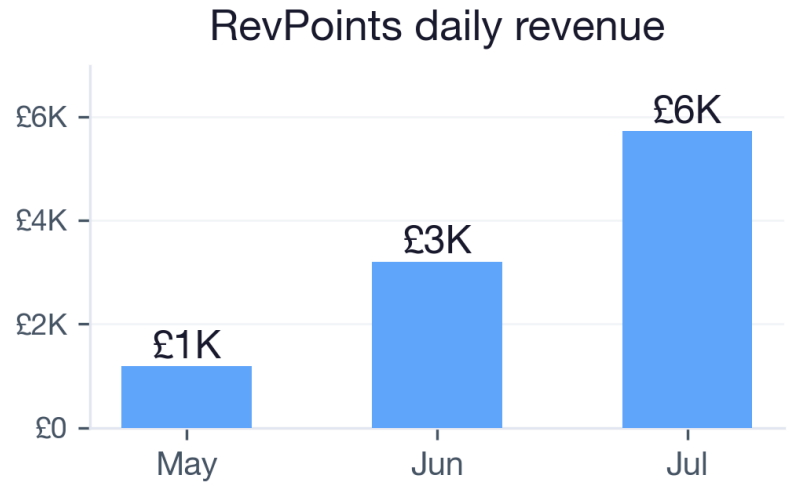
Initiative 9 added **£83K/month** extra cost. Commercial review with the new vendor is urgent. **Recovery: £80K to £115K per L90D**

Card payments by account_level_3 (daily run rate). Top-ups/ATM/POS charges are costs. Interchange fees are revenue. Colour coding: ● Growth opportunity ● Risk / decline.

Lifestyle daily run rate grew 3.5x from May to July. eSIMs and RevPoints deserve deliberate investment.

Two products grew organically with minimal spend. Scaling them is the highest-ROI growth play.





eSIMs: add £190K–£500K per L90D

11.5x daily growth (£0.4K→£4.6K/day) on just 9 users. Initiative 3 is at the start of its adoption curve. Target business travellers and peak travel (Q3/Q4).

RevPoints: add £100K–£180K per L90D

4.8x daily growth (£1.2K→£5.7K/day), zero promotional spend. Expand merchant partnerships.

Subscription upgrades: +£28 GP/user

111,167 Standard users at £15 vs Plus at £43, Ultra at £232. Converting 1–5% to Plus adds **£31K–£156K**.

Stays: £15K in Jul (too early to size)

Initiative 4 launched July with 30% lower cashback.

Lifestyle by account_level_4. eSIM and RevPoints isolated from account hierarchy. Daily run rates (May÷31, Jul÷23). Colour coding: ● Growth opportunity ● Actionable ● Monitor Dashed border = recommendation.

DEEP DIVE: ADDITIONAL LEVERS

Three operational levers add £157K to £272K. Business growth closes the gap.

Each requires an operational decision, not new capital.

$ Credit repricing: £45K–£70K

Loan daily decline: Poland **−£417/day**, Lithuania **−£329/day**, Romania **−£208/day**, Germany **−£126/day** (Init. 1 + 16), Ireland flat. Partially offset: Credit Cards turned positive and BNPL grew **8.9x daily**.

$ Bank payment pricing: £90K–£180K

Total bank payments down **−£1.8K/day (−25%)**. UK leads the decline at **−£918/day**, Romania at **−£466/day**. Init. 5 explains Romania; UK warrants separate investigation.

SMS and operational: ~£22K per L90D

In-house SMS cut costs **−60%**. Legal streamlining halved approval time. Faster refunds improve UX. Youth segment (3,153 users) runs at **−£58/user**, but daily run rate is recovering (May −£2.4K/day to Jul −£1.6K/day).

Business segment: 27x GP/user

2,348 business users at **£913 GP/user** vs 185,894 personal at £34. Growing by 500 users via Scale plan + terminal rollout adds **£300K–£600K**.

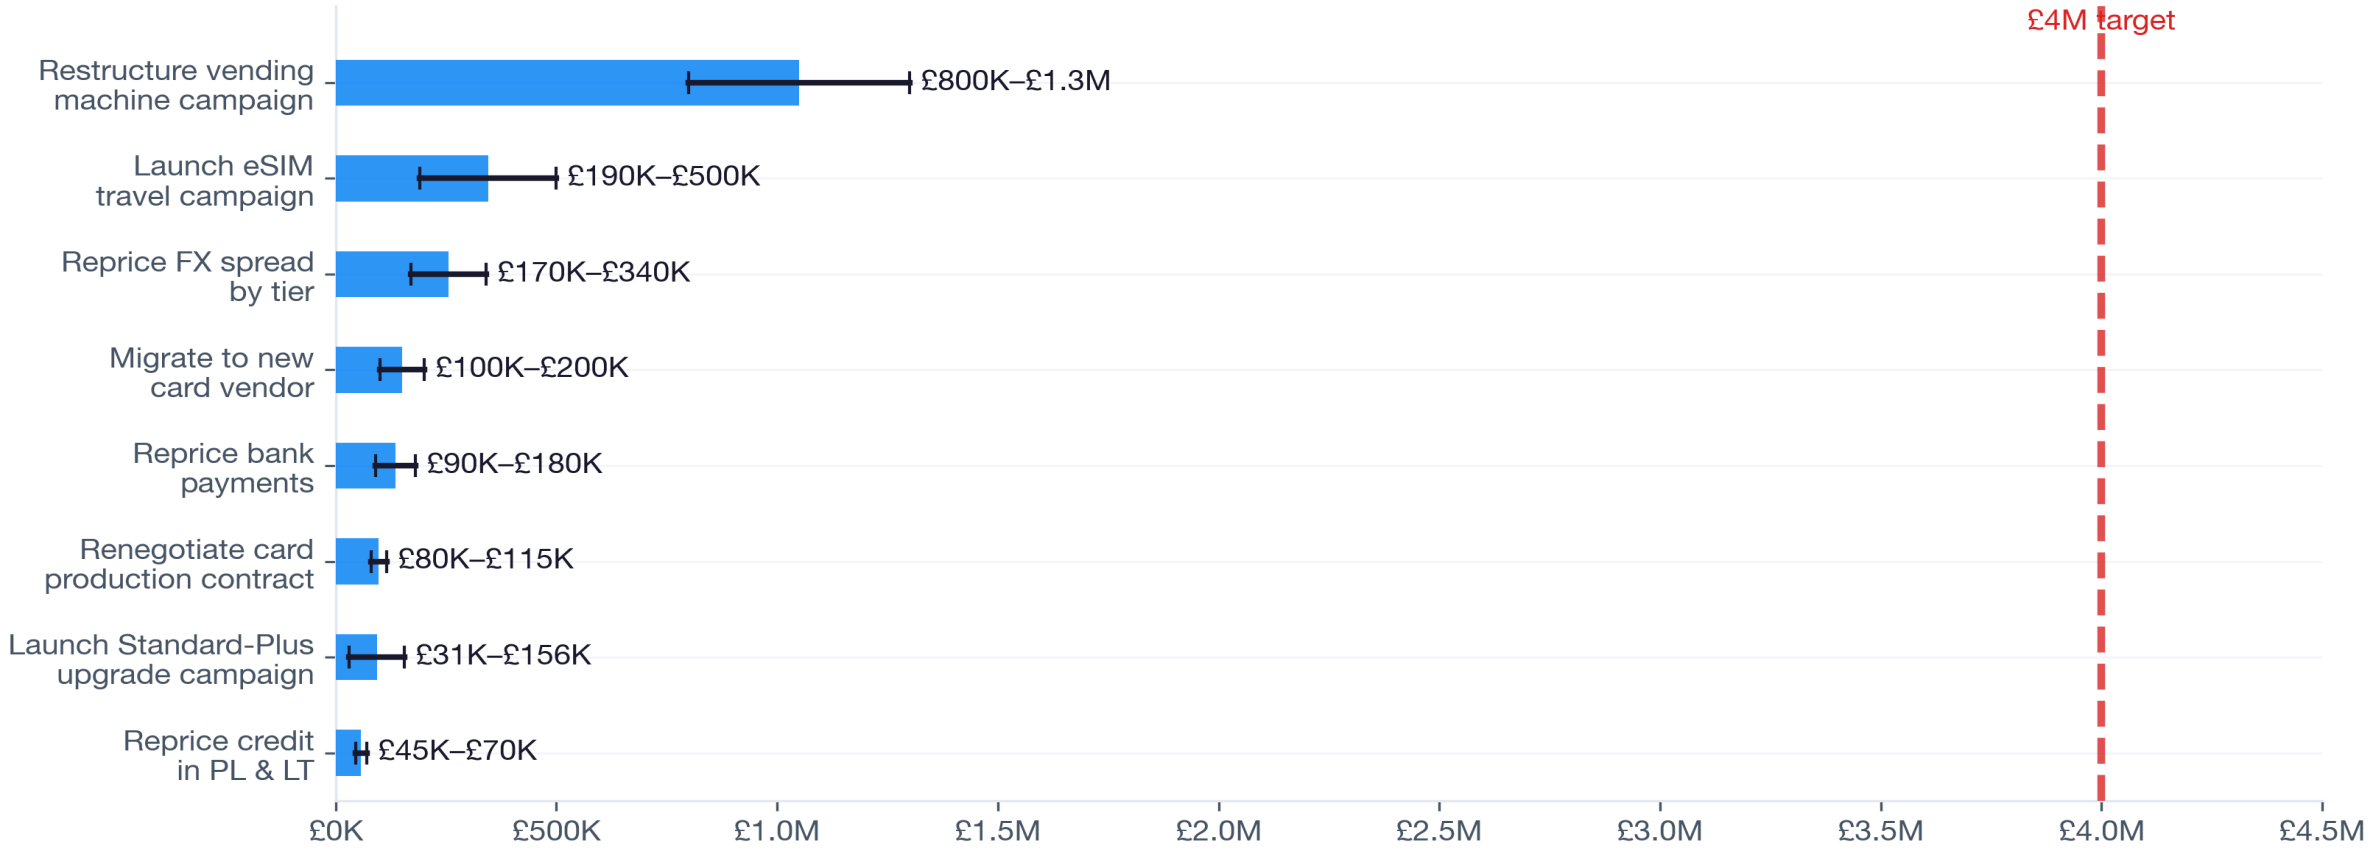
Geographic ARPU gap: UK **£90**/user vs France £23, Romania £17, Poland £31. Localised pricing could recover **£200K–£400K** per L90D.

Initiatives 1, 5, 10, 11, 13, 16, 17 mapped to levers above. Colour coding: • Actionable • Growth opportunity • Monitor Dashed border = recommendation.

INTERVENTION SIZING

Eight interventions total £1.5M to £2.9M. Supplementary plays close the gap to £4M.

Ranges derived from observed daily run rates (no full reversal assumed). Current daily trajectory of +£390K/month, if sustained, adds headroom; eight interventions plus supplementary plays drive the case toward the £12.3M L90D target.



◎ **Closing the gap to £4M:** Execute all eight at the high end (£2.9M), then add business segment growth (+£300K–£600K), geographic ARPU optimisation (+£200K–£400K), and balance management (+£50K–£100K). **Full range: £2.1M to £4.0M.**

ROADMAP

Four immediate actions capture ~£1.0M in 90 days. Full £4M is a 12-month execution.

Now: 0–90 days ~£1.0M HIGH CONFIDENCE

- **Ship qualification gate** for vending machine; cap daily spend at **£16K**
- **Reprice FX spread** by currency pair and plan tier, starting with Romania
- **Renegotiate card production contract** with a volume-tied fee structure
- **Migrate 100%** of new cards onto the new vendor pricing

3–6 months ~£1.0M MEDIUM CONFIDENCE

- **Launch eSIM travel-season campaign** in top business-traveller corridors
- **Sign RevPoints partners** in top travel and retail categories
- **Launch Standard→Plus upgrade campaign** targeting high-engagement users
- **Reprice bank payments** in UK and high-volume currencies

6–12 months ~£2.0M MARKET-DEPENDENT

- **Diagnose loan decline** in PL and LT; test selective repricing if pricing-driven
- **Grow business segment** via Scale plan and POS terminal rollout
- **Pilot localised pricing** in top EU markets to narrow the UK–EU ARPU gap
- **Partner with treasury** on rebalancing case: OFA −34% vs Cash at Banks flat

First horizon = decisions you can make in week one, no new headcount, no new budget. Vending machine restructuring, card vendor renegotiation, and FX repricing are all within direct team control.

APPENDIX

Data methodology, assumptions, and initiative mapping

DATA METHODOLOGY

L90D window: 91 days, Apr 24–Jul 23 2024. Data extracted on Jul 23.

April: 7 days (partial start of window).

July: 23 days (partial end of window).

Daily run rate: Month comparisons use total GP ÷ days in month (31/30/23). Raw monthly totals would under-represent July by 8 days and produce a false decline signal.

L90D total: £8.34M across all 91 days.

KEY ASSUMPTIONS

- amount_gbp denominated in thousands per documentation
- NAP segments grouped by per-record status (captures GP generated during each phase)
- Segment economics (plan/country/user type) use full dataset
- Sizing uses conservative–moderate ranges from observed trends
- No range assumes full reversal of any decline
- FX spread: 25–50% addressable through pricing
- 2024 cohort £14/user vs £49 for pre-2024 cohorts
- Current product mix assumed; no regulatory changes beyond Init. 16

INITIATIVE MAPPING

#1 Credit rate cuts (RO, DE, LT): loan daily run rate −£329–£126/day by market → slide 7

#2 Savings rate increase (Metal/Ultra): Instant Access daily **+84%** (volume offset higher rate cost) → slide 4

#3 eSIM launch: **11.5x** daily growth on 9 users → slide 6

#4 Stays cashback reduction: £15K first month → slide 6

#5 Bank payment HUF/RON free: Romania −£466/day → slides 4, 7

#6 Vending machine campaign: £2.8M L90D cost → slide 3

#7 Subscription benefits (Plus/Ultra): Plan Fees recovered Jun→Jul → slides 4, 6

#8 Card vendor cost changes: ATM **+29%** daily → slide 5

#9 Card production vendor: **+87%** daily cost → slide 5

#10 Simplified business onboarding: no direct P&L signal → slide 7

#11 New terminal for offline payments: Merchant Acquiring still small → slide 7

#12 Money Market Funds: Treasury Services growing from tiny base

#13 Scale plan: 187 users at £2,768 GP/user → slide 7

#14 Faster refund settlement: UX, no direct P&L line

#15 Legal streamlining: process efficiency, no P&L line

#16 German loan provisions 5%→10%: compounds Init. 1 in Germany

#17 In-house SMS: **−60%**, ~£22K/L90D → slide 7

Analysis in Python (pandas, numpy, matplotlib). P&L decomposed via four-level account hierarchy. 17 initiatives mapped; 11 show measurable P&L impact.
